Welcome to Hexagon Geospatial eTraining: Our topic: Mobile MapWorks: Edit and Delete Geometry. In this module we will show how to edit and delete geometries in the Mobile MapWorks.

0:20

1. Start with Mobile MapWorks open displaying the Cherokee County, Georgia, configuration. This is a standard configuration available in Mobile MapWorks.
2. Tap any editable point geometry to open the **Choose** menu. This menu has several options, including options to edit and delete geometry.
3. Tap the **Edit Geometry** option. Using touch gestures, edit the geometry.
4. In this case, move your fingertip over the surface without losing contact to move this point to a different location.
5. From the tools at the top of the screen, tap the **Accept** button to confirm the move.

0:54

We can also edit more complex geometries by editing the vertices.

6. Pan and zoom in to better see the feature to edit.
7. Again, tap the geometry and select **Edit geometry** from the menu.
8. The vertices become active, and using touch gestures, modify the geometry by moving multiple vertices.
9. When you're happy with the adjustments, tap **Accept** at the top to confirm all changes.
10. Now, we see how to delete geometry. Tap any point, line, or area geometry that you want to delete.
11. From the **Choose** menu, tap **Delete Feature** and click **Yes** to confirm your choice. This removes the feature from the map.
