

MOBILE MAPWORKS: SHOW AND EDIT ATTRIBUTES eTRAINING

Introduction

Demonstrates how to display, edit, and update geometry attributes in Mobile MapWorks.

Software

- Mobile MapWorks

Data

- Madison County, AL

Transcript

0:09

Welcome to Hexagon Geospatial eTraining: Your topic: Mobile MapWorks Show and Edit Attributes. In this module you will be shown how to display and edit attributes for particular geometry in Mobile MapWorks.

0:22

1. Start with example data of Madison County, Alabama, open in Mobile MapWorks.
2. Tap any available geometry on the map view. This opens a popup menu that includes options to **Show attributes** and **Edit attributes**.
3. Display the attributes by selecting **Show attributes**.

Show attributes works exclusively in read-only mode. Although you cannot make any changes in this screen, you can check what type of values are assigned to particular attributes for proper geometry.

0:51

4. Tap the **Map** button to return to the map view.
5. Again, you'll tap any geometry on the map view to open the **Choose** menu.
6. This time, select **Edit attributes**.

The **Edit attributes** window allows you to make changes.

1:06

On the Mobile MapWorks backend, the editing options can be configured and may include any of the following:

- Checkboxes to confirm a statement by turning it on or off.
- Pick lists with predefined options.
- Type-in form to type in necessary information.

1:22

7. When the updates have been made, you'll click **Send** to confirm the changes. All information will be sent and updated in the GIS database.
