

1. We increase your **PRODUCTIVITY**.

ERDAS IMAGINE® is the market's leading geospatial imaging suite of tools. ERDAS IMAGINE increases your productivity by simplifying classification, orthorectification, mosaicking, reprojection, map production, image interpretation and change detection, while maintaining the integrity of your geospatial data.

2. We **MULTI-TASK** for you.

ERDAS IMAGINE allows you to process multiple tasks simultaneously, while maintaining optimal performance.

3. We incorporate all **GEOSPATIAL TECHNOLOGIES**.

ERDAS IMAGINE is the foundation of LPS, one of the most powerful production photogrammetry solutions available today. You can easily move from remote sensing and GIS tools to photogrammetry, stereo and 3D visualization tools, all in the same environment.

4. We are as **FAST** as a **Vector GIS**.

We have over 20 years of experience of seamless integration with the world's most widely used vector GIS. Most recently, we have added interoperability with Oracle Spatial. We are the remote sensing experts that provide the most complete vector support.

5. We **UNDERSTAND** your project.

ERDAS IMAGINE is indispensable because of its wide range of intuitive tools and modules. There is little we cannot do with geospatial data. Many of our enhancements are responses to customer requests, so let us know your needs!

6. We support your **DATA**.

We support more geospatial formats and varieties of formats than any other product on the market. Data providers use our tools because of our strong support for data standards. Examining your GeoTIFF tags, you will see that ERDAS IMAGINE was used somewhere in the process.

7. We ensure **FLEXIBLE** processing.

ERDAS IMAGINE allows you to schedule and automate limitless processing on single or multiple files. For example, you can take 4000 images, run three spatial models to create new information, reproject to three projections, and finally, create GeoTIFF, MrSID and ECW files. The ERDAS IMAGINE Batch tools would have assisted you in creating 36,000 new image products.

8. We **TRANSFORM** all your elevation data.

We provide the most complete assistance in creating elevation data. Whether you have LIDAR, contour or raster Digital Elevation Models (DEMs), raw air photos, raw satellite imagery and even radar data, we provide the tools for you to rapidly create and edit elevation data and perform topographic analyses.

9. We have CREDIBILITY.

With over 30 years of experience in the geospatial software industry, ERDAS IMAGINE has been maintained, built and enhanced longer than any other commercial geospatial product. As the world's foremost remote sensing solution, ERDAS IMAGINE builds on its rich history while also pioneering, supporting web services and other technological advancements.

10. We are FREQUENT.

ERDAS IMAGINE continues to be enhanced, offering two major releases each year, with additional updates also available. With improved usability, new features and increased performance, ERDAS IMAGINE provides the best value of any geospatial solution.
